VAIL / MAMMOTH

CASE STUDY

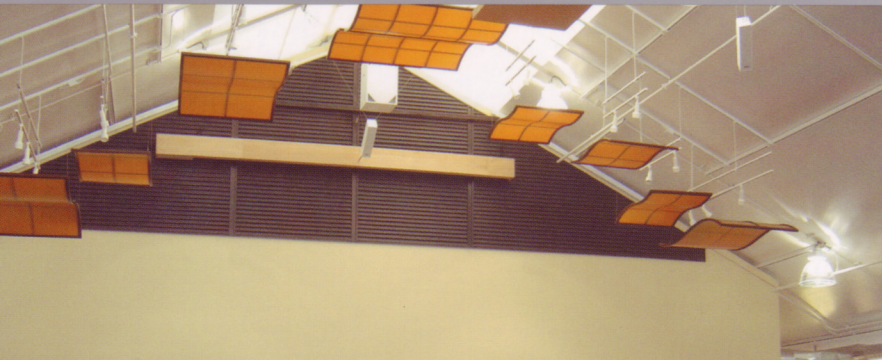

In October 1998, one week prior to the opening of Vail, fire destroyed 'Two Elk lodge' their primary day lodge facility located on top of the mountain. Sprung Instant Structures was called upon to supply a 400-seat fully insulated structure that was delivered, erected and fully functional well before the busy Christmas ski season. At the end of the season, the structure was dismantled and later sold to Mammoth Mountain in California where it now is utilized as a food service pavilion. The relocatable design of the Sprung structure provides both an immediate solution as well as long-term flexibility for rapidly changing resort applications.

TAMARACK RESORT, IDAHO

CASE STUDY

Overlooking Lake Cascade, Tamarack is a four-season destination resort with alpine skiing, Nordic skiing, mountain real estate, water sports and year-round amenities. It was the first new ski resort to open in the U.S. in 22 years. Tamarack needed to provide complete full service facilities quickly in time to meet the opening of ski season and present a first class resort image. The Sprung structures accommodate children's sport and educational programs, rental and retail outlets, the Canoe Grill and cafeteria, the resort pub and the administration offices.

"The most important thing for us was speed. We broke ground in late July and opened December 15th. The Sprung structures erect very quickly, have a long life, are very functional and can be reconfigured or moved. We've modified two of our Sprung structures in the last eighteen months. You can move walls around, you can build private offices, you can put in bars, you can put in fireplaces, and it's a great product. The best thing about working with Sprung is that they came in and did what they said they were going to do."
